# Odon Annual Drinking Water Quality Report 2019

regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act

## Do I need to take special precautions?

customers are our best allies.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-comprorised persons such as persons microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791). providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water. In their health care with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other is

## Where does my water come from?

Odon Water Utilities, Inc. pumps groundwater from 3 separate wells near the town of Odon.

# Source water assessment and its availability

If you have any questions or concerns regarding Odon's source water please contact Terry Raber at 812-887-1034.

Why are there contaminants in my drinking water?

obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or

microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or such as agriculture, urban stormwater runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources

chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same

## How can I get involved?

protection for public health.

If you have any questions about this report or concerning your water utility, please contact Terry Raber at 812-887-1034. You can also join us at our Town Council Meetings with occur regularly on every 3rd Monday of each month. We want our valued customers to be informed about their water

## **Description of Water Treatment Process**

silts, natural organic matter, iron and manganese, and microorganisms. Your water is also treated by disinfection. Disinfection involves the addition of chlorine or other disinfectants to kill bacteria and other microorganisms (viruses, cysts, etc.) that may be in the water. Disinfection is considered to Your water is treated by filtration and disinfection. Filtration removes particles suspended in the source water. Particles typically include clays and be one of the major public health advances of the 20th century.

## Additional Information for Lead

steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and primarily from materials and components associated with service lines and home plumbing. Odon Water Utilities, Inc. is responsible for providing If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several

# Water Quality Data Table

extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally

contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

Important Drinking Water Definitions

Definition

Term

MCLG MCL TT AL Variances and Exemptions MRDLG	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.  MCL Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.  TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.  AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.  Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.  MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.  MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health.  MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
MNR	MNR: Monitored Not Regulated
MPL	MPL: State Assigned Maximum Permissible Level
